KANSAS AGRICULTURAL STATISTICS PROCEDURES AND STAFF

It is with regret that I must inform you that this will be the last year that our office will publish the Annual Farm Facts Bulletin due to budget restraints. This publication has always been a cooperative effort between the USDA – National Agricultural Statistics Service's Kansas Field Office, and the Kansas Department of Agriculture but with the loss of funds and personnel we no longer have the resources to compile and publish this bulletin.

This Annual Report, called the Kansas Farm Facts, is published each year to meet the diverse needs for a reliable reference book on agricultural production, prices, farm income, and various other economic data within the State. This year there are several changes due to budget constraints and strengthened publication rules. Where it is possible, 2007 Census of Agriculture statistics have replaced data that is no longer collected. The number of farms by selected crop on page 11 was replaced with the number of farms from the Census. The information on pages 6 and 7 were also replaced with Census of Agriculture data. The value of production of all crops and livestock has been discontinued, along with livestock inventory values by county.

The data in this publication were made possible by the voluntary cooperation of the Kansas farmers and agribusinesses who responded to our surveys. A special thanks to each producer and agribusiness who provided data on one of our surveys. We believe that the best source of agricultural data is from producers and agribusinesses.

The survey data were collected by mail, by a secure website, telephone interviews, personal interviews, and in-the-field observations. Most estimates are based on probability sample surveys. That is, information collected from a scientifically selected sample of all producers is used to estimate the activities of the entire group. Sampling is not only less costly in time and money than a complete count, but can be more accurate because reporting errors and data-handling errors are minimal compared to those in a complete count or census.

The Kansas Agricultural Statistics staff includes highly trained agricultural statisticians with farm backgrounds and extensive experience in Kansas and other states, a support staff of statistical assistants, computer personnel, and printing-mailing specialists. Jason Lamprecht is the Deputy Director. Lead Statisticians are Bob White and Joel Golz. Agricultural and Survey Statisticians include Quentin Wearne, Dan Kolterman, Stephen Habets, Sherri Hand, Lisa Prickett, Darin Twete, Arcus Pierce, and John Richards. Dona Ratliff and Monica Young provide survey management assistance. Candace S. Thomas provides research and editorial assistance while Dustie Nitcher is our designer and desktop publisher. In addition, a field and telephone staff of part-time National Association of State Department of Agriculture (NASDA) interviewers, working under the direction of NASDA supervisors, collect data by personal and telephone interview. The office staff and crew of enumerators join me in thanking the many farmers and agribusiness firms who provide the data and assist in planning our program of statistics.

Glenda Shepler
Director

2009 KANSAS AGRICULTURAL HIGHLIGHTS

Kansas Agriculture continued to set new records in 2009. The soybean crop set new records in planted and harvested acreage, yield, and production for the State. The corn crop set new record highs in yield and production, while sorghum set a record high yield surpassing the previous record of 80 bushels per acre set in 1992 and 1998. Wheat production and yield was up from the previous year but below the record highs set in 1997 and 1998, respectively. The marketing year average price for the four major crops were below last year's prices. Cash receipts for cattle and calves and all hogs were below a year ago. Hog prices were mixed throughout 2009, while cattle and calf prices were below year ago levels. The value of all farmland and buildings were one percent above 2008, continuing with their upward movement.

Wheat seeding got off to a slow start in early September because of a couple weeks of cool, rainy weather. By the end of the month, farmers had caught up to their normal level. Then the last three weeks of October brought heavy rain across the State halting nearly all planting activity. Only 4 percent of the wheat was seeded those three weeks. By November 16th, 97 percent of the wheat in the State had been seeded. The crop emerged about normal after the slow start, reaching 95 percent by November 23rd. Soil moisture conditions were mostly adequate throughout the fall. Wheat condition was rated 67 percent good to excellent at the end of November. The State received snow and freezing rain in December. Precipitation was then below normal throughout the State the rest of the winter. Temperatures across the State were below normal in December and above normal in January and February. Wheat conditions declined during the winter and were rated 50 percent good to excellent by the end of February. Temperatures had been moderate across the State all spring except for the second week of April when they dropped below freezing. Rainfall was light until the second week of April when widespread showers started and continued throughout the month, with some areas of the State receiving more than ten inches of rain. On April 26th, Statewide topsoil moisture was rated 95 percent adequate to surplus. Wheat condition ratings ranged from 37 percent good to excellent after the freezing temperatures to 48 percent good to excellent by the end of April. The crop progressed behind the 5-year average during May, and by May 31st, only 10 percent of the wheat had turned color, well behind the 5-year average of 39 percent. Temperatures were mild most of the month and then started to warm up the last week of May. The State received widespread rainfall the first two weeks of May. Precipitation also fell on the western half of the State the last week of the month with some areas receiving up to 4 inches. Crop development continued to lag behind during June, hindered by frequent rains the first three weeks of the month. The wet conditions also delayed harvest. By June 21st, only 5 percent of the wheat acreage had been harvested, well below the average of 31 percent. The last week of June was hot across Kansas, reaching over 100 degrees in most areas. As of June 28th, wheat harvest was 47 percent complete, as farmers caught up on harvest, but still lagged behind the 5-year average of 61 percent. Precipitation was light the first two weeks of July and harvest progressed rapidly and was 96 percent complete by mid-July.

Wheat production in 2009 was 369.6 million bushels, 4 percent above the 2008 crop of 356.0 million bushels. The yield, at 42 bushels per acre, was up 2 bushels from a year earlier. The acreage harvested for grain, at 8.80 million acres, was down 100,000 from 2008. Prices for wheat were below 2008 levels all year, ranging from \$5.20 below for March to 76 cents below for December. The preliminary marketing year average price, at \$4.85 per bushel, was down \$2.09 from 2008 and generated a value of production of \$1.793 billion, 27 percent below the previous year. Kansas lost its status as the number one wheat state in the Nation to North Dakota in 2009.

Seeding of the 2010 wheat crop began the second week of September and was behind average all fall. By October 11th, 70 percent of the acreage had been seeded, behind the average by 4 points. Heavy rain across the State the next three weeks slowed planting with an increase of only 13 points. By November 8th, 90 percent of the wheat in the State had been seeded, behind the average of 97 percent. Emergence also progressed behind normal all fall with 78 percent of the crop emerged by November 8th, 9 points behind the average. Top soil moisture conditions were over 80 percent adequate to surplus through mid-October and then over 90 percent adequate to surplus the rest of the fall. Wheat condition was rated as 68 percent good to excellent on November 29th, compared to 67 percent last year.

During April, May and June, rainfall was above average across the State for the 2009 corn crop. Topsoil and subsoil moisture supplies were mostly adequate or surplus in all districts during this time. Corn planting was completed in favorable soil moisture, but was delayed by wet field conditions. By May 10th, only 48 percent of the acreage had been planted compared to the average of 76 percent for that date. Crop development lagged behind throughout the growing season due to the later planting. Mostly adequate soil moisture conditions through the growing season allowed corn to progress well with the crop condition being rated good or excellent a majority of the time. On August 30th, the crop was rated 9 percent very poor to poor, 24 percent fair, and 67 percent good to excellent. Corn harvest was late in 2009, not getting started until mid-September. Harvest was delayed by rain and snow throughout the fall with only 52 percent complete by November 1st, 34 points behind normal. Many fields were not harvested until late November or December.

Corn production was 598.3 million bushels, up 23 percent from last year and set a new record high. The previous record was 507.8 million bushels set in 2007. The 2009 record corn yield was 155 bushels per acre, surpassing the previous record by 3 bushels set in 1996 and was 21 bushels above 2008. Acreage harvested for grain, at 3.86 million, was up 6 percent from 2008. This was the twentieth year in a row that corn production exceeded sorghum production. Prices for corn remained below the 2008 levels all year. The preliminary marketing year average price of \$3.60 per bushel for corn generated a value of production of \$2.154 billion and a new record high. Corn acres harvested for silage was 180,000 acres, up 10,000 acres from the previous year.

The 2009 sorghum crop was behind the 5-year averages through the entire season. Planting started in mid-May and was 32 percent complete by May 31st, 8 points behind normal. By July 5th, planting was 98 percent complete and 89 percent of the crop had emerged. Growing conditions that were generally cool with adequate moisture supplies resulted in the condition of the crop being mostly good to excellent through the summer. However, this slowed the crop's development and, on October 4th, only 39 percent was mature, 18 percent behind the average of 57 percent. At that time, 72 percent of the crop was in good to excellent condition. Many sorghum producing areas had their first freeze the second week of October. Harvest was delayed in October by cool, wet weather and was only 17 percent complete by November 1. Warmer and drier conditions in November allowed harvest to progress. However, on November 29, harvest was only 79 percent complete, 16 percent behind the 5 year average. As of December 20, 2 percent of the crop still had not been harvested.

Sorghum grain production was 224.4 million bushels in 2009, up 5 percent from the 2008 crop of 214.5 million bushels. The yield averaged a record high 88 bushels per acre, up 10 bushels from the previous year. The previous record was 80 bushels per acre set in both 1992 and 1998. Harvested acreage for grain, at 2.55 million acres, was down 200,000 acres from 2008. Sorghum prices were below previous year levels for all months except for December 2009. The preliminary 2009 marketing year average price of \$3.19 per bushel generated a value of production of \$716.3 million, 6 percent above 2008. Kansas retained its position as the number one sorghum grain producing State in the U.S. Sorghum acres harvested for silage were 40,000, down 30,000 acres from 2008.

Soybean planting started later than normal in 2009, but was earlier than the previous year of 2008. Cool weather and above average rainfall delayed the initial plantings but farmers were able to finish by the end of June, slightly ahead of normal. With the adequate moisture at planting and continued rains, soybean development was normal with blooming and setting pods completing near the 5-year average. Development slowed in September and, by October 4th, 75 percent of the soybeans were dropping leaves, and 18 percent had been harvested, 7 points behind the 5-year average for both. At that time, 79 percent of the crop was in good to excellent condition. Rain and cool temperatures in October slowed progress and by the 1st of November, harvest was only 55 percent complete, 23 points behind normal. In November, drier conditions allowed harvest to progress but, by November 29, 10 percent of the crop was still in the field.

Soybean production was 160.6 million bushels, up 34 percent from the last year record crop, thus setting a new record high. A record yield of 44 bushels per acre was set in 2009, up 3 bushels from the previous record set in 2004 and was 7 bushels above 2008. Harvested acreage, at 3.65 million acres, was up 12 percent from the previous year and set a new record for acres harvested. Planted acreage also set a new record, at 3.70 million acres, up 9 percent from the previous year's acreage. Soybean prices for year 2009 were below the previous year for all months except November and December. Based on the preliminary marketing year average price of \$9.25 per bushel, the value of production for the 2009 crop was \$1.486 billion, 32 percent above 2008 and new record high.

Spring 2009 started with above average rainfall, delaying the first cutting of alfalfa until mid-May. The precipitation continued all summer and into the fall, causing all alfalfa cuttings to be behind average. Alfalfa production totaled 3.66 million tons, 27 percent above 2008. Harvested acreage, at 850,000, was also up 150,000 acres from 2008. The average yield for the State was 4.3 tons per acre, up 0.2 ton from 2008. Other hay production totaled 3.57 million tons, 8 percent below 2008. Harvested acreage, at 1.7 million, was also down 350,000 acres from 2008. The average yield for the State was 2.1 tons per acre, up 0.2 ton from 2008 and ties the record high yield set in 1996. All hay production totaled 7.225 million tons, up 7 percent from 2008. Area harvested, at 2.55 million acres, was down 200,000 acres from the previous year. The preliminary marketing year average price of \$103.00 per ton resulted in a value of production for the 2009 crop of \$664.3 million, down 5 percent from 2008. Grazing and stock water supplies were adequate across the State for 2009. Monthly prices for all hay in 2009 were above 2008 levels from January through May but took an downward swing in June for the remainder of the year.

All cattle and calves on farms and ranches on January 1, 2010, totaled 6.00 million head, down 300,000 head from January 1, 2009 and the lowest since 1987. Cash receipts from the sale of cattle totaled \$5.55 billion, down 11 percent from 2008 and the lowest cash receipts since the 2002 level of \$4.81 billion. Monthly cattle prices in 2009 were below year ago levels throughout the year. The 2009 calf crop, at 1.39 million head, was down 3 percent from last year.

The December 1, 2009 hog inventory in Kansas was 1.81 million head, 4 percent above the previous year. Total cash receipts from hogs totaled \$364.9 million, down 9 percent from 2008 and the lowest cash receipts since the 2003 level of \$251.8 million. Monthly hog prices in 2009 were mixed throughout the year. January through April, November and December prices were up, while May through October prices were below last year.

¹ Beginning with 1975, a farm is defined as any place with at least \$1,000 in annual sales of agricultural products. Between 1959 and 1975, a farm was defined as a place of 10 or more acres that had \$50 or more in annual sales of agricultural products or a place with fewer than 10 acres and annual sales of \$250 or more. Prior to 1959, a farm was defined as three acres or more with a value of farm products amounting to \$150 or more or fewer than three acres with sales of at least \$250.

² Land in farms estimates not available on an annual basis until 1950. NOTE: Complete data series available by request.

¹ Horse and mule estimates combined in 1956 and discontinued in 1961. In 1998, the estimate includes horses, ponies, mules, burros, and donkeys; series discontinued in 2000. ² Hog inventory is January 1 for 1867-1954 and December 1 of the preceding year for 1955 to date. ³ Milk cows that have calved beginning 1970. ⁴ All sheep beginning 1974. ⁵ Value of all livestock does not include equine. NOTE: Complete data series available by request.

¹ Prior to 1926, no records kept on acres planted. ² Beginning in 1986, acres harvested for all purposes no longer included acres harvested as forage. ³ Beginning in 1985, price per bushel is marketing year average price, which does not include an allowance for loans outstanding and government purchases. NOTE: Complete data series available by request.

INDEX

<u>TABLE of CONTENTS.....</u>	i
<u>2009 AGRICULTURAL HIGHLIGHTS.....</u>	ii-iii
<u>GENERAL STATISTICS.....</u>	2-9
Agribusiness.....	5
Agricultural export shares.....	3
Agricultural statistics districts.....	Inside Back Cover
Commercial Grain Storage Capacity.....	4
Crops: 2007 Census acreage harvested and market value, by county.....	6-7
Farms: 2007 Census number of farms and land in farms, by county.....	6-7
Feed: commercial, sales of.....	5
mill feed produced.....	5
Fertilizer: sales.....	5
Flour production.....	5
Kansas Agricultural Statistics Districts Map.....	68
Off-Farm Number of Grain Storage Facilities.....	4
Pasture: acres, by county, 2007 Census.....	6-7
Rank of Kansas agriculture.....	2
Stocks of Grain by Quarter.....	4
2007 Census market value of livestock produced, by county.....	6-7
Weather data, by district and county.....	8-9
Weights and Measures.....	68
<u>CROP STATISTICS.....</u>	10-41
Corn: all, acres planted and harvested, by county.....	23-26
grain: acreage, yield, production, by county.....	23-26
irrigated and non-irrigated grain production, by county.....	27-28
Cotton: acreage, yield, production, by county.....	41
Dry Beans: acreage, yield, production, by county.....	41
Hay: Alfalfa: acreage, yield, production, by county.....	35-36
All Other: acreage, yield, production, by county.....	37-39
Oats: acreage, yield, production, by district.....	40
Sorghum: all: acres planted and harvested, by county.....	19-21
grain: acreage, yield, production, by county.....	19-21
irrigated and non-irrigated grain production, by county.....	22
Soybeans: acreage, yield, production, by county.....	29-31
irrigated and non-irrigated production, by county.....	32-33
State Summary: Acreage, yield, production, and value.....	11
State Summary: 2007 Census number of farms and harvested acres, by crop.....	11
Sunflowers: Oil & non-oil acreage, yield, production, by county.....	34
Wheat: acreage, yield, production, by county.....	12-15
summer fallow and continuous cropped grain production, by county.....	17
irrigated and non-irrigated grain production, by county.....	16,18

LIVESTOCK STATISTICS..... 42-53

Cattle: calves born, by county.....	48-49
all cattle and calves, inventory by county.....	48-51
beef cows, inventory, by county.....	48-51
commercial slaughter, by month.....	44
milk cows, inventory, by county.....	48-51
milk cows and production, by month.....	52
inventory, by classes.....	43
number of cattle operations.....	43
production, disposition, income.....	45
Cattle on feed: classification and weight groups, by quarter.....	46
marketings and placements, by month.....	46
marketings - grain fed and other.....	45
marketings, by size group.....	45
inventory, by county.....	48-51
number of feedlots, by size group.....	45
Hog: inventory, by district.....	53
inventory, by class.....	43
number of hog operations.....	43
pig crop, by district.....	53
production, disposition, income.....	47
Honey: number of colonies, yield, production, stocks, price, and value.....	53
Sheep: inventory, by classes.....	43
number of sheep operations.....	43
lamb crop.....	43
production, disposition, income.....	47
Wool: production, price and value.....	47

ECONOMIC STATISTICS..... 54-58

Cash Rents: irrigated, non-irrigated and pasture, by county.....	55
Farm income.....	56
Farmland values and rents.....	58
Income from farming, cash receipts, gross and net farm income.....	56
Production expenses.....	57

HISTORICAL STATISTICS..... 59-65

Historical tables.....	60-65
corn: acreage, yield, production, price and value, 1880-2009.....	65
livestock, inventories and value, 1870-2010.....	61
number of farms and land in farms, 1900-2009.....	60
sorghum: acreage, yield, production, price and value, 1940-2009.....	63
soybeans: acreage, yield, production, price and value, 1926-2009.....	64
wheat: acreage, yield, production, price and value, 1900-2009.....	62

Bushel weights:
Wheat & soybeans = 60 lbs.
Corn, sorghum & rye = 56 lbs.
Barley (grain) = 48 lbs
Oats = 32 lbs.
